INTRODUCTION

As a freelancer working in the field of web technologies, you are hired to develop a brand-new website for a seller to sell pearl products in the market. Your client knows that you are good at building a content management system (CMS).

DESCRIPTION OF PROJECT AND TASKS

This module involves knowledge about website design, website layout techniques, client-side scripting, and server-side scripting (all combined in one CMS project). You will be using one of the most popular content management systems – **WordPress (version 5.9.1)**.

Your job is to develop a website backed by the content management system. Please create a **souvenir theme** of a given starter WordPress theme. Please name your theme as **Pearl Shops**.

The website's goal is to display an overview of pearl products in the market and to give a list of newly created pearl products, which could attract the interest of pearl users. The target audiences for this page are all users around the world. Please also make sure you have the appropriate **title** and **slogan** defined in the content management system.

The **admin** and **pearl seller** could manage the pearl product by adding and modifying every entry for each pearl product either updating existing information or adding new pearl products to the catalogue.

NOTE: You are given multiple WordPress plugins (NO other plugin is allowed). Choose the appropriate plugins to aid your development. You are recommended to spend time researching and experimenting with the given plugins ahead of time.

1. Content Management System

For administration tasks, we need 2 user profiles, **Admin** and **Pearl Seller**:

- The **Admin** user: Access to the complete WordPress main dashboard.
  - Username : admin
  - Password : admin
- The **Pearl Seller** user: Access as editor role in the CMS.
  - Username : pearlsell
  - Password : pearlsell

The CMS login page must be **white-label**. This means the login page SHOULD NOT show the CMS default logo. The background should be a **full-page** pearls product photo from one of the popular online pearl shops. The WordPress logo is replaced with given logo.

Also, the login page SHOULD NOT include any "**wp**" wordings for white-label reasons. Please make the backend admin URL as follows: **<host>/admin/**

2. Managing Pearl Products and Pages

The client wants to be able to add, edit, update and delete online the Pearl product records. There are **selected pearl products** which have custom pearl pages.

2.1 Selected (Highlighted) Pearl Products

The client wants to highlight the following 4 **types of pearl products online**. For now, the list is **static**. In the future, the client may add or remove pearl products catalogue from the selected list. But this is NOT in the current scope of work. The pearl products that will be displayed are as follows:

- **Necklaces**
- **Bracelets**
- **Earrings**
- **Rings**

Every pearl product page has a **different layout** than the general pages. The client would like to display a large **full-page background** of the pearl photo for every product. Once, the pearl photo is selected, the pearl features photo is displayed on the page. The client also requires that new pearl products news displayed on the pages.

2.2 Other Pearl Products

A general page template is sufficient to display the other types of pearl product pages. These online pearl product pages DO NOT NEED to display the news posts. A sizable picture banner ought to be the header of the main page. The pages featured the selected pearl photo image.

3. News Blog Post

From time to time, there will be news from the website as well as from **selected pearl products**. These blog posts should be categorized as follows:

- **Site Updates**
- **Seasonal Pearl products**
- Each of the **selected pearl products**

The client wants to show news posts from all categories in the home page. While in the **selected pearl product** pages, the client wants to show news posts from the respective pearl product catalogue.

4. Page and URL Strategy

Accessibility is very important to our website. We would like to leverage different levels of accessibility optimization.

4.1 Page Level Accessibility

Custom HTML code written must be semantically meaningful and accessible. Use HTML5 semantic tags and ARIA attributes whenever appropriate. Provide alternate texts for images. Provide titles for anchors.

4.2 URL Level Accessibility

Each pearl product page should have its URL permalink. For example, the page for the **Necklaces** may have the URL: **<host>/pearl-necklaces/**

News posts should have the following URL structure:

- All news: **<host>/news/**
- News from a category: **<host>/news/<category>/**
- Specific news post: **<host>/news/<category>/<post>/**

5. Dashboard Configuration

The client prefers website features such as **At a Glance**, **Activity,** and **Quick Draft** in the dashboard. Please configure these dashboard widgets and remove all others from the dashboard.

6. Sign Up Form

The client informed us of their tight budget to develop a fully functional Sign-Up form. Therefore, we propose to the client to design the User Interface (UI) **form** only. Inputs submitted will NOT be saved. Display meaningful messages when the Sign-Up form is submitted or when there are input errors.

The Sign-Up form should have the following input fields: **username**, **email** and **password**.

7. Menus

The menu should stick to the top when scrolling down the page. The menu should at least display the following items:

- **Home**
- **Pearl Products** (drop down menu)
- **Seasonal Pearl Product Events** (click to list posts from the category “Seasonal Pearl Product Events”)

8. Front-End Requirement

You will need to create your own theme based on the given starter themes. You will need to implement the following elements for your web page:

- A footer with copyright and social media links:
  - "**Copyright © 2024 - All rights reserved**" where the year should be the current year dynamically based on server time.
  - Footer plugins should be used for footer links to **Twitter**, **Facebook,** and **Instagram**. Users can change the social links.

Feel free to add and change as many elements as you like, but the elements should blend in with the given design.

The client does not like refreshing the whole page. Page transition should be loaded via JavaScript with an animated transition effect (this requirement DOES NOT apply to the admin area). You may implement this feature using PJAX, Turbolinks, etc.

9. Home Page Layout Columns Strategy and Mockup

The layout should be responsive for different screens including **desktop** and **mobile**.

9.1 Desktop Screen

The home page on the desktop screen should have a multiple-column layout. The left half is the news and the right half is some kinds of covers and images.

9.2 Mobile Screen

The home page on the mobile screen should have a top-down layout strategy. Each column takes the full width of the screen except for the list of **selected pearl products** (they should have a left and right 2-column layout).

10. Further Optimization Tasks

- The page needs to be optimized for search engines. You can choose one of the provided plugins or implement your SEO.
- Remember to also optimize certain parts of your website such as URLs, sitemap, etc.
- Secure your page by installing and configuring a security plugin.

NOTE: If the plugin you would like to choose is broken or does not work as expected, you need to choose another one or feel free to fix this plugin.

INSTRUCTIONS TO THE COMPETITOR

Save the files of your application in directory on the server and name it as **"CompetitorID_Module_A"**, where **CompetitorID** is the ID assigned to you during the competition day.

MATERIALS PROVIDED

ITEM	DESCRIPTION
wordpress-5.9.1.zip	WordPress CMS.

Themes: blankslate.2022.zip underscores.zip	WordPress starter themes.
Plugins: advanced-custom-fields.5.12.zip all-in-one-wp-security-and-firewall.4.4.10.zip autodescription.4.2.3.zip contact-form-7.5.5.6.zip contact-form-plugin.4.2.4.zip contact-forms-builder.2.1.4.zip elegant-responsive-content-slider.1.0.2.zip jetpack.10.6.zip seo-by-rank-math.1.0.83.zip wonderplugin-carousel-trial.18.5.zip wordfence.7.5.8.zip wordpress-seo.18.2.zip wp-responsive-jquery-slider.1.7.zip	WordPress plugins.
